A new high performance system to automatically lubricate racks and pinions, open gearing, linear guideways, ballscrews, and chain drives is available from Andantex, USA. A compact automatic relubrication unit, Flexxpump, is available in two sizes 400/500 and 1500/2000. These pumps deliver grease or oil to the item being lubricated through a piston pump with programmable frequency and delivery rate. They are combined with tubing and open cellular polyurethane (P.U.) foam applicators for chain and open gearing drives.

Lubricate THESE COMPONENTS with the new FLEXPUMP system from DLS

Complete system consists of:

Flexxpump – Automatic relubrication unit with piston pump (pressure up to 70 Bars) and programmable frequency and delivery rate settings!

- Includes up to 10 outlets for multi-point lubrication
- Power by internal battery or 24V DC supply
- Remote operation monitoring and setup available through 4 pin M12 connector

Optimized Grease or Oil – New lubricants specifically developed for components to be lubricated Flexxpump

400/500 offers 400cc grease cartridge or 500cc oil and Flexxpump 1500/2000 offers 1500cc grease bellows or 2000cc oil

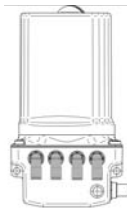

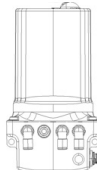

Polyurethane (P.U.) Foam Applicators - New gear tooth or chain sprocket applicators insure correct film thickness.

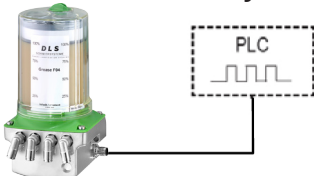

Low density PU foam absorbs lubricant up to 90% of its volume allowing high viscosity lubricants to be applied and absorbed to insure film thickness and avoid hardening.

Tubing, Fittings and Tools – All interconnecting components available to provide complete Automatic Lube system

DIMENSIONS FlexxPump 400/500 DLS

TECHNICAL DATA FlexxPump 400/500 DLS

Dimensions, Max:	width x height x depth: 112mm x 196mm x 94mm
Weight, without lubricant:	1120g
Storage/volume:	400cm ³ grease in a cartridge (types: 400); 500ml oil (types: 500)*
Lubricant:	oil or grease up to NLGI. 3 (also containing solid lubricants)
Function/principle:	piston pump
Delivery rate per pulse/stroke:	0.15cm ³
Number of strokes/cartridge:	2700
Number of outlets:	up to 4; right-angled and pivotable
Operating voltage:	24V DC
Operating current:	I _{max} : 350mA; typical: 200mA
Fuse:	500mA (characteristic: delay)
Lube-connection:	high pressure tube 6x4 (flexible tube with diameter 6mm outside; 4mm inside)
Operating pressure:	max. 70bar (1000 psi)
Operating temperature:	-25°C... +70°C (-13F ... +160F)
Combination:	possible with progressive systems
Pressure monitoring:	integrated, electronic (monitoring back pressure)
Level monitoring:	integrated, reed-contact
Electrical connection:	M12x1; 4-pin
Protection class:	IP 65 (= suitable for underwater operation up to 1m)
Installation Position:	grease - any; oil - upright
Error Signal:	PLC OPTICAL cartridge empty/back pressure/internal error optional LED connector 90° (134-002-014/-015)
Housing Material:	Zinc, Polyamide

*Relubrication unit delivered without grease cartridge.
Cartridges are available as accessories.

Connector PIN assignment M12x1

The FlexxPump uses a four-pin socket to connect a M12x1 plug allowing communication with the machine controller. An external 24VDC power supply is used to switch ON and OFF (voltage of +20 ...up to +30 VDC, supplied to PIN1). When voltage is supplied the lubrication pump is in operating condition. If there are no errors (Pump OK) the input voltage will be transferred to the output signal (PIN 4) indicating all is OK. Once the voltage supply to PIN 1 is stopped (switched OFF), the pump rests and saves the current operating conditions in memory. When the pump is turned back on the saved operating conditions will be continued PIN 4 relays the operating condition.

Connector PIN assignment M 12x1

PIN 1: Input voltage +20...30 VDC, color brown

PIN 2: Activation of the individual pump outlets (page 7), color white

PIN 3: Ground (GND), color blue

PIN 4: Output Signal, color black

Output signal (Pin 4) - high (+20...30VDC) = OK

- low (0 V) = Error (over current/over pressure/electronic error)

- 0.5 Hz. pulse (0V low/20..30V high) = empty signal

- Pump operation: 7-12 sec low signal while pump is operating

FLEXPUMP 1500/2000 RELUBRICATION UNIT

Time-controlled or pulse-driven relubrication unit

Direct controlled by PLC (incl. error-monitoring)

Piston-pump (1-5 pumpbodies)

Oils and greases up to NLGI 2 including solid particles

2-10 outlets

Different times and/or quantities of lubricant

Pressure: max. 70 bar (1000 PSI)

1500 cc grease/2000 cc oil

Low weight and minimum current consumption

Suitable for combined relubrication of:

- chains
- ball-bearings
- linear bearing blocks
- ball screw nuts

LUBRICATION OF PINIONS AND RACKS

Lubrication of open spur gear drives and racks

For tooth systems in open drives, an automatic lubrication supply is preferred. Exceptions are possible, in the case of very small modules, slow speed $<1\text{ m/s}$ and light duty cycles manual lubrication is adequate. Therefore, we offer an adhering grease - F01 - as well as the lubricant F02 (for an application in the food industry (with H1-approval)), and F03 for bearings, racks and pinions.

Automatic relubrication with polyurethane foam pinions

A far better technical solution to relubricate the tooth system is an automatic and continuous spreading of the lubricant with polyurethane foam pinion which are brought into contact with the drive gear or rack. The lubrication pinion does not transmit a torque - it only carries the grease to that part of the tooth system it touches.

The necessary relubrication amounts for different tooth systems with different running conditions is shown in the diagram below. Conditions for the validity of the values shown in the table below are the use of a suitable DLS polyurethane foam pinion and a proper lubricant like DLS F01, F02 or F03.

Lubricant quantities for lubrication with PU Foam Pinions

LUBRICATION PINION

Technical specification lubrication pinion

The DLS lubrication pinions are made of an open cellular polyurethane foam (temperature range -30° C...+150° C). Pinions with module 3 and bigger are put together in segments. To choose the correct lubrication pinion it has to be decided by design, if the lubrication pinion should be mounted on the rack or drive pinion.

Using lubrication pinions of an open-cellular polyurethane foam material ensures an optimal supply of the tooth system over long distances. The material stores the lubricant and delivers it in smallest quantities. This lubrication avoids over-lubrication as well as wear (as a consequence of insufficient lubrication).

SPLITTERS FOR RELUBRICATION UNIT FlexxPump

Part Number	Inlets	Outlets	Grease (g) Oil (o)	Quantity of Lubricant per piston stroke	Type
134-005-002	1	2	g	~.08 cc	Splitter 1 inlet, 2 outlets, grease
134-005-003	1	3	g	~.05 cc	Splitter 1 inlet, 3 outlets, grease
134-005-004	1	4	g	~.04 cc	Splitter 1 inlet, 4 outlets, grease
134-005-006	1	2	o	~.08 cc	Splitter 1 inlet, 2 outlets, oil
134-005-007	1	3	o	~.05 cc	Splitter 1 inlet, 3 outlets, oil
134-005-008	1	4	o	~.04 cc	Splitter 1 inlet, 4 outlets, oil

Each outlet of the FlexxPump can be combined with only one splitter. The combination of 2 or more splitters at one pump outlet is not possible. Therefore, the maximum lubrication points that can be serviced by one FlexxPump 404DLS and 4 splitters is 16.

INSTALLATION RECOMMENDATIONS:

The splitters are designed to connect to 6 mm outside diameter tubes. The splitters should be located as close as possible to the FlexxPump outlets.

The length of the tubes between the outlet side of the splitter and the lubrication points should be as close as possible to equal. Pressure differences between the outlets should not exceed 3 bars (43.5 PSI). The amount of lubricant supplied to lubrication points can vary slightly depending on the pressure differences at the outlets.

*changed version

Application:

connection between lubrication points and plastic tubes from FlexxPump.

Technical data:

- working pressure max. 80 bar
- working temperature -30° C...+100° C
- fluid oil, grease
- material nickel-plated brass 58, NBR, stainless steel

Features:

- full flow for the fluid
- very simple seal function through integrated O-rings with own seat
- can be inserted and extracted
- all straight connectors with integrated hexagon socket
- all rotary elbow male adaptors can be rotated under pressure

TUBE CONNECTORS

tube-connectors - right-angled

Part Number	Description	Version	Thread	tube ØT
for tube Ø 6				
134-001-001	tube connector	right-angled	M 6 x 1	6

TUBES

Part Number	Description
134-003-001	tube 6x4 - pre-filled with grease F01
134-003-002	tube 6x4 - pre-filled with grease F02
134-003-003	tube 6x4 - pre-filled with grease F03
(*) 134-003-004	tube 6x4 - pre-filled with grease F04
(*) 134-003-005	tube 6x4 - pre-filled with grease F05
134-004-001	tube 6x4 - empty
134-004-002	tube 6x4 - empty - transparent

* maximum length: 5m

The tubes are sold by meter; maximum length: 10 m.

ACCESSORIES

tube scissor 134-002-002

Replacement battery 134-002-004

Part Number	Description
134-002-002	tube scissor (metal, exchangeable blades)
134-002-003	cable M12x1; 5m long, PUR suitable for dragchain for mounting on PLC
134-002-004	battery for relubrication unit FlexxPump (high performance lithium battery)
134-002-005	syringe - to fill the oil into the tube

Trademarked attributes of third parties are marked with ® and are property of the respective owner of that trademark.

grease F01

Standard grease for open gears

- based on lithium/calcium complex with extreme pressure additives, which are combined with the soap structure so that an optimum adhesiveness to the metal surface is possible.
- heat-resistant, good corrosion protection attributes, contains no solid particles.

Operative Ranges:

- developed as special grease for highly loaded open gears.
- due to the high temperature properties usable for a wide range of applications, where high temperatures and high loads exist.

temperature range -30°C to +150°C

Part Number	Description
000-101-105	cartridge for FlexxPump, pre-filled with 400 cc of grease F01
000-105-115	grease-bellow for FlexxPump 1500; pre-filled with 1500cc of grease F01
000-101-210	grease F01, 1 kg tin
000-101-220	grease F01 400 cc, cartridge for grease gun

LUBRICANTS - GREASE

grease F02

With H1-approval

- synthetic special grease for high temperatures based on synthetic hydrocarbons with a partial special thickener of high metal affinity.
- NSF/H1-registration for incidental food contact.

Quality Attributes:

- water (cold, hot) and steam resistant; high thermal and oxidation stability; for high load; very good wear-protection; high service life and wide temperature range; optimum lubricating effect at low friction values

temperature range -40°C to +140°C

Part Number	Description
000-102-105	cartridge for FlexxPump, pre-filled with 400 cc of grease F02
000-102-115	grease-bellow for FlexxPump 1500; pre-filled with 1500cc of grease F02
000-102-210	grease F02, 1 kg tin
000-102-220	grease F02 400 cc, cartridge for grease gun

grease F03

Special grease for bearings, linear guideways & ball screws

- short-fibred and homogeneous lithium-saponified universal grease with one mineral oil. It can be used for roller and slide bearing lubrication and is appropriate for medium and high load applications.
- very adhesive; appropriate for short-stroke applications.
- water resistant and protective against corrosion.

Operative Ranges:

- lubrication of linear bearings (recirculating ball bearing guides, roller guides and ballscrews)
- in combination with a lubrication pinion and continuous re-lubrication suitable for open gear lubrication
- very well conveyable in relubrication units

temperature range -20°C to +120°C

Part Number	Description
000-103-105	cartridge for FlexxPump, pre-filled with 400 cc of grease F03
000-103-115	grease-bellow for FlexxPump 1500; pre-filled with 1500cc of grease F03
000-103-210	grease F03, 1 kg tin
000-103-220	grease F03 400 cm ³ , cartridge for grease gun

LUBRICANTS-GREASE

grease F04

Special grease for bearings

- multipurpose grease based on lithiums-calcium-soap with EP additives
- suitable for bearings with medium loads

Operative Ranges:

- lubrication of bearings and ballscrews
- in combination with a lubrication pinion and continuous re-lubrication suitable for open gear lubrication
- well conveyable in relubrication units and distributors

temperature range -30°C to +130°C

Part Number	Description
000-104-105	cartridge for FlexxPump, pre-filled with 400 cc of grease F04
000-104-115	grease-bellow for FlexxPump 1500; pre-filled with 1500cc of grease F04
000-104-210	grease F04, 1 kg tin
000-104-220	grease F04 400 cm ³ , cartridge for grease gun

grease F05

Special grease for rack and bearings

- aluminium complex soap and graphite
- based on a high quality mineral oil
- optimum adhesiveness and good corrosion protection

Operative Ranges:

- lubrication of highly loaded racks and pinions
- up to 0°C very good conveyable

temperature range -20°C to +150°C

Part Number	Description
000-105-105	cartridge for FlexxPump, pre-filled with 400 cc of grease F05
000-105-115	grease-bellow for FlexxPump 1500; pre-filled with 1500cc of grease F05
000-105-210	grease F05, 1 kg tin
000-105-220	grease F05 400 cm ³ , cartridge for grease gun

LUBRICATION OF CHAINS

Suitable for use with FlexxPump 500/2000

Controlled minimum lubrication of oil

Lube sprocket made of open-cell PU-foam

Perfect Lube Points

Nonwearing and long-lasting

Integrated sleeve bearing

High cleanliness

Lightweight

Special designs possible

Chain oil transfer to the chain link plate

PU-LUBRICATION SPROCKETS

PU-Lubrication Sprockets Simplex - Straight Axes
